PROFESSIONAL SUMMARY

MBA candidate with 5 years of experience across automotive sales operations, CRM systems, and customer workflow management at STG Auto Group. Currently building and testing an event-based social platform in closed beta, using user interviews and real interaction behavior to refine product decisions and MVP scope. Background in psychology with a strong interest in user behavior, systems, and product execution.

PRODUCT WORK

Event-Based Social Discovery Platform · MVP — Closed Beta, Initial User Cohort | 2025 – Present

- Built an event-based social platform that helps people attending the same live music events connect before the event through profiles, event matching, and shared event participation.
- Recruited and onboarded an initial closed beta group of 8–10 users from EDM and live event communities; observed usage patterns and conducted follow-up conversations to understand how users discover events and initiate connections.
- Used feedback from beta users to refine the matching experience and narrow MVP scope, prioritizing event participation and user connections over secondary social features in the initial release.

Lead Source Analytics & Profitability Dashboard · STG Auto Group — CRM Analytics | 2026 | [Tableau Public](#)

- Conducted an end-to-end analytics investigation across 380K+ dealership leads using Tableau and CRM data to evaluate lead source effectiveness, funnel conversion performance, and dealership profitability.
- Developed executive dashboards and KPI frameworks that transformed raw sales and CRM data into actionable visualizations for performance monitoring and decision support.
- Found that high-volume lead sources were not always the most profitable and that appointment-setting represented the largest conversion bottleneck, highlighting conversion efficiency as a stronger driver of revenue generation than lead volume alone.

Integrated Automotive Finance System · Systems Analysis — Academic Project | 2025

- Mapped the full CRM → customer → finance → conversion workflow across a dealership; identified 4 handoff friction points and designed a centralized system architecture to reduce redundant data entry and streamline deal processing.

EXPERIENCE

Sales Executive & CRM Lead · STG Auto Group — Ontario, CA Jan 2022 – Present

- Managed 20–30 active leads monthly across the full sales cycle—from initial contact through delivery—consistently ranking among top performers in deal volume and customer retention.
- Analyzed customer follow-up patterns, lead progression, and CRM workflow effectiveness within VinSolutions, identifying engagement gaps and improving consistency across key stages of the sales funnel.
- Evaluated lead source performance through conversion, cost-per-lead, and sales outcome analysis; leveraged CRM and Tableau reporting to identify acquisition channels with the strongest revenue potential.
- Collaborated across sales and finance teams to identify process bottlenecks, improve customer handoffs, and streamline workflows that supported a more efficient purchasing experience.

Warehouse Operations Supervisor · United Parcel Services — Ontario, CA Jun 2021 – Jan 2022

- Led 15+ employees across high-volume shifts; used real-time operational data to identify bottlenecks and adjust staffing, maintaining throughput under strict time and safety requirements.
- Standardized onboarding and training materials, improving shift-to-shift consistency and cutting new hire ramp time.

Creative Content Specialist · Montclair Auto Exchange — Montclair, CA May 2020 – Jul 2021

- Built and maintained digital listings and marketing content using Adobe tools across 100+ active vehicle listings; organized reusable asset libraries that reduced update time across seasonal campaigns.

EDUCATION

Master of Business Administration (MBA) *Expected June 2026*

University of California, Riverside · Beta Gamma Sigma Honors Society (Top 20% of Business Students)

Bachelor of Arts, Psychology *May 2024*

California State Polytechnic University, Pomona

SKILLS

Product: MVP Design & Validation, User Interviews, Behavioral Research, Journey Mapping, Feature Prioritization, Beta Testing, Agile/Scrum

Analytics: Tableau, SQL, Python, R, Excel, Funnel Analysis, CRM Analytics (VinSolutions, Salesforce), Data Modeling, KPI Frameworks

Business: Systems Thinking, Stakeholder Communication, Deal Structuring, Cross-functional Collaboration, Process Improvement
